The Geometry of Life

Yesterday, Jesula, one of the weekend supervisors, introduced a new education program for the kids. It is an on-going course covering an introduction to several fields of study, such as geometry and chemistry. The course is offered in Creole and English. Jesula came with a projector to show series of images. Sheriff Stéphanie assisted Jesula and to maintain discipline, as the kids have very creative ways to be excused from the school room. In the external school the kids attend all the books are in French. The kids understand French but do not speak it. Oddly enough, some kids had trouble reading Creole. Dr. Steph helped with this problem.

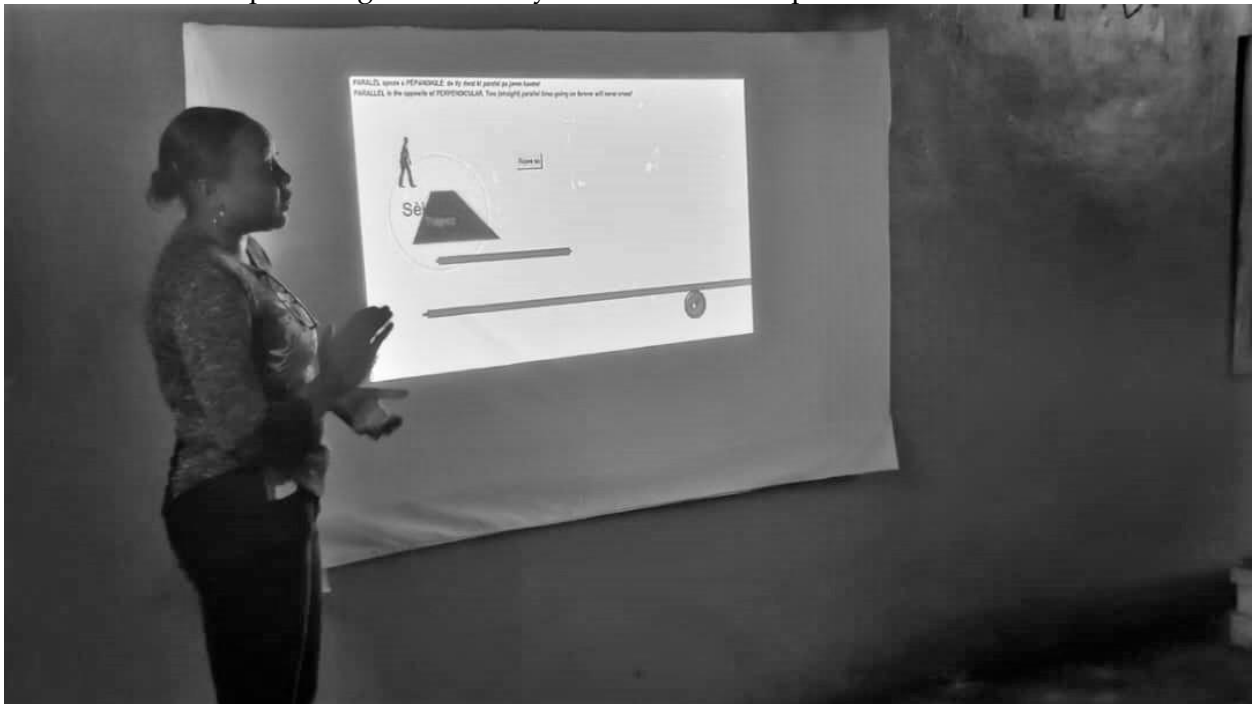

What I liked about this was that as the schools remain closed by the protests, violence, lack of fuel, the Santa Chiara staff are picking up the educational slack. Years ago, I had a dream of starting our own certified school. I even had a building near us I would rent. The school would be for our kids, plus many neighborhood kids could attend free of charge. It is time for me and Gabens to think more seriously about this possibility. Here are some photos of the presentation.

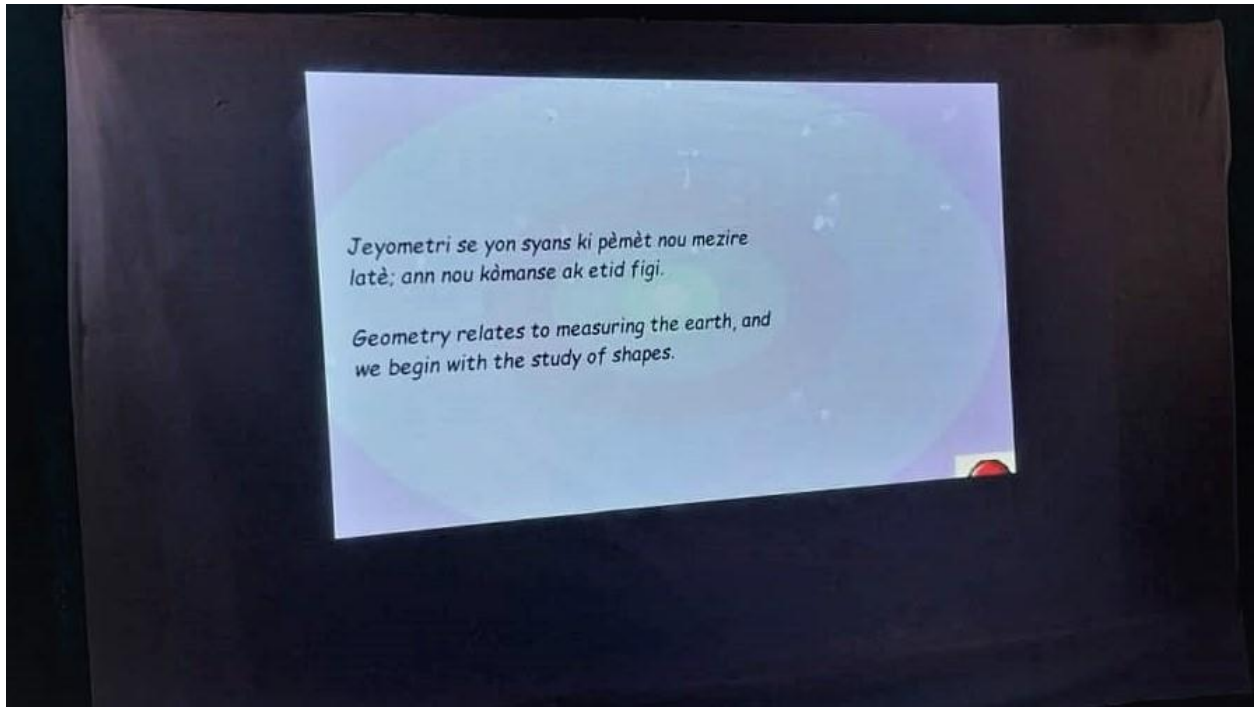

Jesula running the projector.

Dr. Steph telling the kids why education is so important for their future.

Steph probably knows all about geometry.

I did not know that.

*Yesterday I promised to share some good news today...
it will have to wait until tomorrow in order to keep this short.*
